

## *LAMBERT'S RESVERATROL*

*From the desk of Gene W. Harlow, M.D., FAAFP,  
September 1, 2009:*

Over the past few years, there has been a rekindled interest in alternative medicines as practiced in non-industrial societies. Many prominent medical institutions sent teams to the Orient, Africa, and Central and South America to evaluate the medications used for hundreds of years by indigenous peoples.

One study, the documented longevity of red wine users in France, Spain, and Portugal, was found to be due to a polyphenol call resveratrol. Further evaluation revealed other qualities of resveratrol--antibacterial, antiviral, anticancer and increase in longevity.

As importantly, there were no adverse effects such as found in many of the expensive drugs used in today's modern pharmaceuticals.

I strongly recommend the natural product of *Lambert's Resveratrol* as a proven, safe, and palatable source of polyphenols with the many medical benefits and without any adverse side effects.

*Gene W. Harlow, M.D., FAAFP*
